Enter / Quit

screen -S *foo*	create a screen named "foo"
screen -x *foo*	attach to an existing screen named "foo"
[^A] [d] or **[^A] [^D]**	detach current screen
exit or **[^D]** (in screen shell)	exit the shell starting the screen thus exit the screen
exit or [^D] are not screen commands but bash ones	

Syntax convention

^	[**Control**] key
[^A]	[**Control**] + [a]
[a]	[a]
[A]	[**Shift**] + [a]
[^A][A]	[**Control**] + [a] then [**Shift**] + [a]
[^A][A]	different from [**^A**][a]

Window (screen tabs)

[^A] [c]	**C**reate a new window
exit or **[^D]** (in screen shell)	exit the current shell created by the window, thus exit the window
[^A] [0]	Go to window **0**
[^A] [3]	Go to window **3**
[^A] [n]	Go to **n**ext window
[^A] [p]	Go to **p**revious window
exit or [^D] are not screen commands but bash ones	

Disclaimer

This cheat only describe the default key bindings
key bindings can be modified by editing ~/.screenrc or another screenrc file

Split screen

[^A] [S]	Split screen horizontally
[^A] [|]	Split screen vertically
[^A] [^I] or **[^A] [Tab]**	Change splitted part
[^A] [Q]	Remove all splitted parts

Misc

[^A] [A]	Rename current window
[^A] [k]	Kill current window
[^A] [^A]	Switch to last used window
[^A] [a]	Send [**^A**] to current screen
